

SIRENTEC

Digital Forensics & Incident Response Case Management

Accelerate and Manage Your Digital Investigations

SirenTec accelerates and streamlines digital forensic investigations and computer security incident response teams by centralizing the management, control and analysis of cyber security evidence for computer crimes and data breaches.

Integrating the management of collection, control and analysis of evidence and incidents along with person assignments, communications and lab notations of cases in a single, easy to use application, SirenTec can be rapidly deployed and used by organizations in minimal time -- replacing labor intensive, manual processes or technologies unsuited for the task.

Who Uses SirenTec?

- Digital Forensic Investigation Labs
- Law Enforcement Labs
- eDiscovery Investigation Teams
- Security Incident Response Teams

No More Spreadsheets

Gone are the days of emailing spreadsheets for case updates. SirenTec dashboards provide an overview and up-to-the minute statuses of ongoing cases, allowing your team to keep up to date with group assignments to individual cases, and specific task tracking .

Track, Search and Manage Evidence

SirenTec simplifies the processing and handling of digital evidence and case documents in a repeatable workflow. Distributed teams across multiple locations can access and update cases from a single interface, while all evidence is indexed for searching in a separate, secure storage.

Drawing together digital and physical evidence into a single system, SirenTec promotes true chain of custody that not only tracks the location and custody of physical evidence but also the digital data contained within, including successive generations of culled data.

Benefits

End-to-End Case Tracking

Complete Digital Evidence Management

Complete Case Document Management

Workflow Management for Repeatable,
Defensible Processes

Features
